## Common Skin Disorders

### Skin Allergies

- Curcumin, the polyphenolic phytochemical in turmeric, can modulate your immune system and prevent the release of histamine from your mast cells.
- A mice study showed curcumin to be an excellent anti-itching agent. It could reduce itching triggered by histamine release. Curcumin blocked TRPV1 (the capsaicin receptor) in the sensory neurons of mice. TRPV1 receptors are responsible for the painful and burning sensations.
- Curcumin can help alleviate nasal congestion, sneezing, and congestion, and other symptoms of allergic rhinitis. In a study done on 241 patients with perennial allergic rhinitis, curcumin was found to improve nasal airflow in a period of two months.

### Psoriasis

- The European Journal of Dermatology published a small study on the effects of oral curcumin combined with visible light therapy. Results showed that the combination might be safer than traditional treatments for people with moderate to severe plaque psoriasis.

- A 2016 study published in the journal Biochimie found that curcumin has demonstrated therapeutic effects on psoriasis in mice. The National Psoriasis Foundation also lists turmeric as a natural remedy that may minimize skin and psoriatic arthritis flare-ups.
