

FERTI-Q

Capsules

- Co-enzyme Q10 helps to improve motility of sperms and kinetic features of semen
- L - Arginine helps to stimulate reproductive organs by improving fertility
- Additional ingredients like Zinc, Selenium and Lycopene provide nutritive condition and improve chances of fertility in males
- Enhances metabolism & spermatogenesis

Co-enzyme Q10 is a key ingredient which helps to increase sperm count and motility. Supplementation with exogenous CoQ(10) may play a positive role in the treatment of asthenozoospermia.

L-Arginine is converted into a chemical called Nitric oxide. Nitric oxide is important to erectile function because this gas helps blood vessels relax, so more oxygen-rich blood can circulate.

Zinc is an important trace mineral required for healthy male reproductive system and sperm production. It enhances the production of testosterone in the prostate gland. Because zinc has antioxidant properties, it protects the sperm from free radicals that damage cells.

Selenium is an essential element for sperm mobility. Nearly 50% of selenium in men is concentrated in the testes and seminal ducts; it is known that selenium deficiency results in the impairment of sperm motility which is the first indication of impending infertility.
