

The World's kindest Antibiotic to Kid's

SURGMOX CV 228.5 MG

Amoxicillin 200 mg + Clavulanic Acid 28.5 mg Dry Syrup (in orange flavour)

Indications:

- Pneumonia
- Urinary tract infections
- Acute otitis media
- Skin and soft tissue infections
- Throat Infections
- Dental Infections

- 10 days therapy of high dose Amoxicillin/Clavulanate is significantly more effective than 5 days of cefdinir as therapy for Acute Otitis Media in Children. (<https://www.ncbi.nlm.nih.gov/pmc/articles/PMC3963277/>)
- Amoxicillin has proven efficacy against a wide range of Gram-Positive and Gram-Negative Bacteria.
- Furthermore, with the addition of clavulanic acid, the spectrum is increased to include beta-lactamase-producing strains as well as broadening the coverage to include other bacterial species.
- Stable in presence of Gastric Acid.

Also available
